APPENDIX – 32 (R&S)
UNIVERSITY OF MADRAS

SRI SANKARA ARTS & SCIENCE COLLEGE
(AUTONOMOUS)

M.Sc., PHYSICS
(effective from the academic year (2018-2019)

REGULATIONS

Choice based credit system

1. CONDITIONS FOR ADMISSION

M.Sc. PHYSICS

A candidate who has passed the B.Sc Degree Examination in branch III Physics main with Mathematics as one of the ancillary subjects or B.Sc Applied Science of this University with Mathematics as one of the ancillary subjects or an examination of some other University accepted by the Syndicate as equivalent thereto shall be eligible for admission to M.Sc Physics degree course.

2. ELIGIBILITY FOR THE AWARD OF DEGREE

A candidate shall be eligible for the award of the degree only if he/she has undergone the prescribed course of study in a college affiliated to the University for a period of not less than two academic years, passed the examination of all the four semesters prescribed earning **91 credits** and fulfilled such conditions as have been prescribed therefore.

3. DURATION OF THE COURSE

The duration of the course is for two academic years consisting of four semesters.

4 EXAMINATIONS

There shall be four semester examinations: first semester examinations at the middle of the first academic year and the second semester examination at the end of the first academic year. Similarly, the third and fourth semester examinations shall be held at the middle and the end of the second academic year, respectively.

5. COURSE OF STUDY AND SCHEME OF EXAMINATIONS

NAME OF THE COURSE – M.Sc. PHYSICS

The scheme of examinations for different semesters shall be as follows:

Vide **APPENDIX–B**

The following procedure to be followed for Internal Marks:

Theory Papers: Internal Marks – 25 Maximum Marks

i) BestTwo tests out of 3	10 marks
ii) Attendance	5 marks
iii) Seminar	5 marks
iv) Assignment	5 marks
	---
	25 marks

Break-up Details for Attendance

Below 60%	- No marks
60% to 75%	- 3 marks
76% to 90%	- 4 marks
91% to 100%	- 5 marks

Practical: Internal Marks 40
Maximum Marks

Attendance	5 marks
Practical Best Test 2 out of 3	30 marks
Record	5 marks
	---
	40 marks

Project:

Internal Marks	Best 2 out of 3 presentations	20 marks
Viva		20 marks
Project Report		60 marks

6. REQUIREMENTS FOR PROCEEDING TO SUBSEQUENT SEMESTERS:

1. Candidates shall register their names for the First semester examination after the admission in the PG courses.

2. Candidates shall be permitted to proceed from the First Semester upto the Final Semester irrespective of their failure in any of the Semester Examination subject to the condition that the candidates should register for all the arrear subjects of earlier semesters along with current (subject) Semester subjects.
3. Candidates shall be eligible to proceed to the subsequent semester, only if they earn, sufficient attendance as prescribed therefore by the Syndicate from time to time.

4. Provided in case of candidate earning less than 50% of attendance in any one of the semester due to any extraordinary circumstance such as medical grounds, such candidates who shall produce Medical Certificate issued by the Authorised Medical Attendant (AMA), duly certified by the Principal of the College, shall be permitted to proceed to the next semester and to complete the course of study. Such candidate shall have to repeat the missed semester by rejoining after completion of final semester of the course, after paying the fee for the break of study as prescribed by the University from time to time.

7. PASSING MINIMUM:

1. There shall be no Passing Minimum for Internal.
2. For External Examination, Passing Minimum shall be of 50% (Fifty Percentage) of the maximum marks prescribed for the paper.
3. In the aggregate (External + Internal) the passing minimum shall be of 50% for each Paper/Practical/Project and Viva-voce.

4. Grading shall be based on overall marks obtained (internal + external).

8. CLASSIFICATION OF SUCCESSFUL CANDIDATES:

Candidates who secured not less than 60% of aggregate marks (Internal + External) in the whole examination shall be declared to have passed the examination in the First Class.

All other successful candidates shall be declared to have passed in Second Class.

Candidates who obtain 75% of the marks in the aggregate (Internal + External) shall be deemed to have passed the examination in First Class with Distinction, provided they pass all the examinations (theory papers, practicals, project and viva-voce) prescribed for the course in the First appearance.

9. GRADING SYSTEM:

1. **Passing Minimum** is 50% of the ESE and also 50% of the maximum of that

paper/course.

2. **Minimum Credits to be earned**:

For TWO year Programme: **Best 91 Credits**

(Part A (81 Credits): Core, Elective, Non-major Electives and Extra Disciplinary and

Part B (10 Credits): Soft skills and Internship)

For THREE year Programme: **Best 135 Credits**.

(Part A (120 Credits): Core, Elective, Non-major Electives and Extra Disciplinary and

Part B (15 Credits) : Soft skills and Internship)

3. Marks and Grades:

The following table gives the marks, grade points, letter grades and classification to indicate the performance of the candidate.

Conversion of Marks to Grade Points and Letter Grade (Performance in a Paper /Course)

RANGE OF MARKS	GRADE POINTS	LETTER GRADE	DESCRIPTION
90–100	9.0–10.0	O	Outstanding
80–89	8.0–8.9	D+	Excellent
75–79	7.5–7.9	D	Distinction
70–74	7.0–7.4	A+	Very Good
60–69	6.0–6.9	A	Good
50–59	5.0–5.9	B	Average
00–49	0.0	U	Re-appear
ABSENT	0.0	AAA	ABSENT

Ci= Credits earned for course i in any semester.

Gi= Grade Point obtained for course i in any semester.

n refers to the semester in which such courses were credited.

For a Semester:

GRADE POINT AVERAGE [GPA] = ∑iCiGi / ∑i Ci

Sum of the multiplication of grade points by the credits of the courses

GPA = ----------

Sum of the credits of the courses in a semester

For the entire programme:

CUMULATIVE GRADE POINT AVERAGE [CGPA] = ∑n∑iCniGni /∑n∑iCni

Sum of the multiplication of grade points by the credits of the entire programme

CGPA= ----------

Sum of the credits of the courses of the entire programme

CGPA	GRADE	CLASSIFICATION OF FINAL RESULT
9.5–10.0	O+	First Class - Exemplary *
9.0 and above but below 9.5	O	
8.5 and above but below 9.0	D++	First Class with Distinction *
8.0 and above but below 8.5	D+	
7.5 and above but below 8.0	D	
7.0 and above but below 7.5	A++	First Class
6.5 and above but below 7.0	A+	
6.0 and above but below 6.5	A	
5.5 and above but below 6.0	B+	Second Class
5.0 and above but below 5.5	B	
0.0 and above but below 5.0	U	Re-appear

* The candidates who have passed in the first appearance and within the prescribed semester of the PG Programme (Core,

Elective, Non-major Electives and Extra-Disciplinary courses alone) are eligible.

10. PATTERN OF QUESTION PAPER:

PART –A (50 words):
Answer 10 out of 12 Questions 10 x 1 = 10 marks

PART –B (200 words):
Answer 5 out of 7 Questions 5 x 5 = 25 marks

PART –C (500 words):
Answer 4 out of 6 Questions 4 x 10 = 40 marks

11. APPEARANCE FOR IMPROVEMENT:

Candidates who have passed in a theory paper / papers are allowed to appear again for theory paper / papers only once in order to improve his/her marks, by paying the fee prescribed from time to time. Such candidates are allowed to improve within a maximum period of 10 semesters counting from his/her first semester of his/her admission. If candidate improve his marks, then his improved marks will be taken into consideration for the award of Classification only. Such improved marks will not be counted for the award of Prizes / Medals, Rank and Distinction. If the candidate does not show improvement in the marks, his previous marks will be taken into consideration.

Candidate will be allowed to improve marks in the Practicals, Project, Viva-voce, Field work.

12. TRANSITORY PROVISION:

Candidates who have undergone the course of study prior to the academic year 2018-2019 will be permitted to appear for the examinations under those Regulations for a period of three years i.e., up to and inclusive of April/May 2021 Examinations. Thereafter, they will be permitted to appear for the examination only under the Regulations then in force.

APPENDIX – 12 (S)
UNIVERSITY OF MADRAS

SRI SANKARA ARTS & SCIENCE COLLEGE
(AUTONOMOUS)

M.Sc., PHYSICS

(effective from the academic year 2018 – 2019)

SYLLABUS

PAPER 1 MATHEMATICAL PHYSICS

UNIT1 :LINEAR VECTOR SPACES AND TENSORS

Linear operators – Vectors in n-dimensions – Matrix representation of vectors and operators in a basis – Linear independence, dimension – Inner product – Schwarz inequality – Orthonormal basis – Gram-Schmidt Process – Eigenvalues and Eigenfunctions of operators/matrices – Hermitian and unitary operators/matrices – Cayley-Hamilton theorem –Diagonalizing matrix.

Tensors: Coordinate transformations – Contravariant and Covariant Vectors – Tensors of higher rank – Einstein's summation convention – Kronecker delta – Product rule – Quotient rule– Levi-Civita tensor in three dimensions.

UNIT 2 :LINEAR AND PARTIAL DIFFERENTIAL EQUATIONS

Second order linear differential equations – Wronskian– Sturm –Liouville theory – Orthogonality of eigenfunctions– Illustration with Legendre, Laguerre,Hermite and Bessel differential equations – Expansion of polynomials – Dirac delta function.

Solution of Partial Differential Equations by the Method of Separation of Variables – Solution of Laplace's Equation in Cartesian Coordinates and Polar Coordinates – Fourier Equation of Heat Flow – Solution of Heat flow equation.

UNIT3 :COMPLEX VARIABLES

Functions of a complex variable – Single and multivalued functions – Analytic functions – Cauchy – Riemann conditions – Singular points – Cauchy's theorem and integral formulae – Taylor and Laurent expansions – Zeros and poles – Residue theorem and its applications

UNIT4 :LAPLACE AND FOURIER TRANSFORMS

Laplace transforms – Solution of linear differential equations with constant coefficients – Fourier integral – Fourier transforms (Infinite), Fourier sine and cosine transforms – Convolution theorems.

UNIT5 :GROUP THEORY

Basic definitions – Lagrange's Theorem – Invariant subgroup – Homomorphism and Isomorphism between groups – Representation of a group – Unitary representations –Schur's lemmas – Orthogonality theorem – Character table –

Simple applications to symmetry groups and molecular vibrations.

BOOKS FOR STUDY

1. **P. K. Chattopadhyay, 2013**, *Mathematical Physics,* 2nd edition, NEW AGE, Chennai.

2. **G. Arfken and H. J. Weber,** 2012, *Mathematical Methods for Physicists,* 7th Edition, Harcourt (India), New Delhi.

PAPER 2 CLASSICAL MECHANICS AND RELATIVITY

UNIT1 :LAGRANGIAN AND HAMILTONIAN FORMULATIONS

Newton’s equations and conservation, laws for systems of particles, D’Alembert’s principle and Lagrange’s equations of motion, Hamiltonian and Hamilton's equations of motion

UNIT2 :SIMPLE APPLICATIONS

Two – body central force problem, scattering by central potential, two-particle scattering, cross section in lab system. Small oscillations, transformation to normal coordinates and frequencies of normal modes, simple examples.

UNIT3 :MECHANICS OF RIGID BODIES

Angular momentum and kinetic energy, moment of inertia tensor, Euler angles, Euler’s equations of motion, torque-free motion, symmetrical top.

UNIT4 :CANONICAL TRANSFORMATIONS

Hamilton's principle of least action, Lagrangian and Hamiltonian equations of motion, Poisson brackets, Canonical transformations and their generators – Simple examples.Hamilton-Jacobi theory, action angle variables, application to harmonic oscillator problem.

UNIT5 :RELATIVITY

Lorentz transformations, relativistic mechanics, relativistic Lagrangian and Hamiltonian for a free particle; Space- time and energy – momentum four vectors, centre of mass system for two relativistic particles.

BOOKS FOR STUDY

PAPER 3 ELECTROMAGNETIC THEORY AND PLASMA PHYSICS

UNIT1:ELECTROSTATICS

Gauss law, Poisson and Laplace equation, Green's theorem, Green's functions, Potentials with Dirichlet and Neumann boundary conditions, Solution of Laplace's equation in a rectangular box, solution by separation in spherical polar coordinates. Multipole expansion of the potential due to a charge distribution. Electrostatics in metal media: Electric displacement vector, boundary conditions, dielectric sphere in a uniform field, molecular polarisibility and electrical susceptibility, Electrostatic energy in dielectric field.

UNIT2 : MAGNETOSTATICS

Magnetic vector potential and magnetic fields of a localized current distributions, magnetic moment, force and torque on a current distribution in an external magnetic field, magnetostatic energy, magnetic induction and magnetic field in macroscopic media, boundary conditions, uniformly magnetized spheres.

UNIT3 : MAXWELL'S EQUATIONS

Faraday's laws of induction, Maxwell's displacement current, Maxwell's equations, Poynting's theorem, vector and scalar potentials, gauge invariance, Coulomb and Lorentz force, equation of continuity, covariant formulation of electrodynamics.

UNIT4 : ELECTROMAGNETIC WAVES AND RADIATION

Plane electromagnetic waves: Propagation in a non-conducting medium, reflection and refraction at a plane interface between dielectrics, polarization by reflection and total internal reflection, waves in a conducting medium – propagation of EM waves in rectangular wave guides. Radiation from an oscillating electric dipole, multipole radiation.

UNIT5 : ELEMENTARY PLASMA PHYSICS

The Boltzmann Equation – Simplified magneto-hydrodynamic equations – Electron plasma oscillations – The Debye shielding problem – Plasma confinement in a magnetic field – Magneto-hydrodynamic waves – Alfven waves and magnetosonic waves**.**

PAPER 4 INTEGRATED CIRCUITS AND MICROPROCESSOR 8085

UNIT1 :LINEAR ICS AND APPLICATIONS

Operational Amplifier: Solution of simultaneous equations and differential equations – Instrumentation amplifier – Log and Antilog amplifiers – Analog multiplication and division.

Generation of square, triangular and sine waves – pulse generation – Schmitt trigger – Active filters (Second order Butterworth design).

Timer 555: Internal architecture and working – Schmitt trigger – Astable and monostablemultivibrators – Phase Locked Loop.

UNIT2 :DATA COUNTERS

Binary weighted and R/2R ladder DAC – Accuracy and resolution – Dual slope DAC- ADC – Simultaneous conversion – Counter method – Successive approximation.

UNIT3 :COMBINATIONAL AND SEQUENTIAL LOGIC CIRCUITS

4-bit binary adder and subtractor– Encoder and Decoder – Multiplexer and Demultiplexer.Flip – Flops: RS, D-type, JK and M/S JK Flip-Flops, Counters – Asynchronous , Synchronous and Modulus counters – BCD counter – Shift registers – Ring counter – Johnson counter.

UNIT4 :8085 PROGRAMMING, PERIPHERAL DEVICES AND THEIR INTERFACING

Instruction set –Addressing modes – Programming techniques – Memory mapped I/O scheme – I/O mapped I/O scheme – Memory and I/O interfacing – Data transfer schemes – Interrupts of 8085 – Programmable peripheral interface (PPI) – Control group and control word – Programmable DMA controller – Programmable interrupt controller – Programmable communication interface – Programmable counter/interval timer.

UNIT5 :8085 INTERFACING APPLICATIONS

Seven segment display interface – Interfacing of Digital to Analog converter and Analog to Digital converter – Stepper motor interface – Measurement of electrical quantities (voltage and current) – Measurement of physical quantities (temperature and strain).

PAPER 5 PRACTICAL – I

Part – 1A General (Any FIVE Experiments)

1. Cornu's Method – Young's modulus and Poisson's ratio by Elliptic fringes.
2. Stefan's constant.
3. Bang gap energy – Thermistor / Semiconductor.
4. Hydrogen spectrum – Rydberg's constant.
5. Thickness of the enamel coating on a wire – by diffraction.
6. Coefficient of linear expansion – Air wedge method.
7. Permittivity of a liquid using an RFO.
8. L-G plate.
9. Lasers: Study of laser beam parameters.
10. Arc spectrum: Copper.

Part – 1BELECTRONICS AND MICROPROCESSOR 8085(Any TEN Experiments)

1. FET CS amplifier – Design, Frequency response, input impedance, output impedance

2. Study of attenuation characteristics of Wien's bridge network and design of Wien's bridge oscillator using Op-Amp.

3. Study of attenuation characteristics of Phase shift network and design of Phase shift oscillator using Op-Amp.

4. Design of a Schmitt trigger circuit using IC 741 for a given hysteresis – application of squarer.

5. Design of a square wave oscillator using IC 741 – Triangular wave oscillator.

6. Construction of pulse generator using the IC 741 – application as frequency divider.

7. OP-Amp. – 4 bit Digital to Analog converter [R / 2R ladder network].

8. Study of R-S, clocked R-S and D-flip flops using NAND / NOR gates.

9. Study of J-K, D and T flip flops using IC 7476 / 7473.

10. Arithmetic operations using IC 7483 – 4 bit binary addition and subtraction.

11. IC 7490 as a scalar and display using IC 7447.

MICROPROCESSOR 8085

12. 8 –bit addition and subtraction, multiplication and division.

13. Sum of a set of N data (8 – bit numbers), Picking up the smallest and largest number in an array. Sorting in ascending and descending order.

14. Code conversion (8 – bit numbers) : (a) Binary to BCD and (b) BCD to Binary.

15. Addition of multibyte numbers, Factorial.

BOOK FOR REFERENCE

PAPER 6QUANTUM MECHANICS – I

UNIT1 : SCHROEDINGER EQUATION

Interpretation and conditions on the wave function – Ehrenfest's theorem – stationary states.

UNIT2 : BASIC FORMALISM

Hermitian operators for dynamical variables – Eigen values and Eigen functions – Expansion postulate – Proof of uncertainty principle – Commutability and compatibility – Conserved quantities – Identical particles – Symmetry and antisymmetry of wave functions – Implications.

UNIT3 : EXACTLY SOLVABLE PROBLEMS IN ONE DIMENSION

Particle in a box – Square well potential – Barrier penetration – Periodic potentials and energy bands – Simple harmonic oscillator – Creation and annihilation operators.

UNIT4 : THREE DIMENSIONAL PROBLEMS

Angular momentum and spherical harmonics – Parity – Reduction of two – body problems for central forces – Particle in a spherical well – Hydrogen atom – Charged particle in an uniform magnetic field.

UNIT5 : ANGULAR MOMENTUM

Commutation relations – Ladder operators – Eigen value spectrum– Addition of angular momenta – C.G. Coefficient – Spin – Pauli matrices – Spin states of a two electron system.

BOOKS FOR STUDY

1. **P. M. Mathews** and **K. Venkatesan**, *2010, A Text book of Quantum Mechanics,* Reprint, Tata McGraw-Hill, New Delhi.

2. **L. I. Schiff**, *2014, Quantum Mechanics,* 4th Edition, International Student Edition, MacGraw-Hill Kogakusha, Tokyo.

3. **V. Devanathan,** 2011, *Quantum Mechanics,* 2nd edition, Narosa Publishing House, New Delhi.

4. **Zettili, 2016, *Quantum Mechanics: Concepts and Applications, 2nd edition,* Willey India PVt.Ltd, New Delhi.**

5. **V. K. Thankappan**, *2002, Quantum Mechanics: Through Problems*, New Age Publishers, Delhi.

6. **W.Greiner**, *2008, Quantum Mechanics Special chapters*, 3rd Edition, Springer, Delhi.

7. **J.Griffiths David**, *2016,Introduction to Quantum Mechanics*, 2nd Edition, Cambridge University Press, New Delhi.

BOOKS FOR REFERENCE

1. **E. Merzbacher**, 2011, *Quantum Mechanics*, 2nd edition, Alpha Science International Ltd, 2nd Revised edition ,UK.

2. **V. K. Thankappan**, *2012, Quantum Mechanics*, 2nd Edition, Wiley Eastern Ltd, New Delhi.

PAPER 7 STATISTICAL MECHANICS

UNIT1 :THERMODYNAMICS

Laws of thermodynamics, Thermodynamic potentials, Maxwell's relations, phase equilibrium, Gibbs phase rule, phase transitions, Ehrenfest's classification, Clausius – Clapeyron equation.

UNIT2 :BASIC PRINCIPLES OF STATISTICAL MECHANICS

Postulates of classical statistical mechanics, Liouville's theorem, micro-canonical, canonical and grand canonical ensembles, partition function, entropy of an ideal gas, Gibbs paradox. Density operator, postulates of quantum statistical mechanics. Langevin theory of paramagnetism, one–dimensional Ising chain.

UNIT3 : IDEAL BOSE GAS

Bose – Einstein distribution, Equation of state of a Bose gas, Bose – Einstein condensation, Landau's theory of liquid He II ,Black – body radiation, phonons, Einstein and Debye theories of lattice heat capacity.

UNIT4 :IDEAL FERMI GAS

Fermi – Dirac distribution, Equation of state of a Fermi gas, free electron gas in metals, heat capacity, paramagnetic susceptibility, thermionic emission.

UNIT5 :SEMICONDUCTOR STATISTICS AND FLUCTUATIONS

Non- degenerate semiconductors – degenerate semiconductors – random walk – Brownian motion.

BOOKS FOR STUDY

1. **S.K.Sinha** , 2009 , *Statistical Mechanic*s , Narosa, New Delhi.
2. **B. K. Agarwal and M. Eisner,** 2016, *Statistical Mechanics*, 3rd Edition, New Age International, New Delhi.
3. **J. K. Bhattacharjee,** 2001, *Statistical Mechanics*: *An Introductory Text,* Allied Publication,New Delhi.
4. **F. Reif,** 2011,*Fundamentals of Statistical and Thermal Physics,* Mac Graw-Hill,NewYork.
5. **C. Kittel, 1987,** *Thermal Physics,* 2nd edition, CBS Publication, New Delhi.
6. **M. K. Zemansky,**2011, *Heat and Thermodynamics,* 8th edition, McGraw-Hill, New York.

BOOKS FOR REFERENCE

1. **R. K. Pathria,** 2011,*Statistical Mechanics,* 3rd edition, Academic Press, USA.
2. **L. D. Landau and E. M. Lifshitz,** 1996,*Statistical Physics, 3rd Edition,* Butterworth-Heinemann, UK.
3. **K. Huang,** 2009,*Statistical Mechanics, 2nd Edition,* Taylor and Francis, London.

4. **W. Greiner, L. Neise**and**H. Stoecker, 1995,***Thermodynamics and Statistical Mechanics*, Springer Verlang, New York.

PAPER 8 PRACTICAL– II

Part – 2AGENERAL (Any FIVE Experiments)

1. Cornu's Method – Young's modulus and Poisson's ratio by Hyperbolic fringes.
2. Determination of strain hardening coefficient.
3. Viscosity of liquid – Meyer's disc.
4. F. P. Etalon using spectrometer.
5. Solar constant.
6. Solar spectrum – Hartmann's formula.
7. Arc spectrum – Iron.
8. Edser and Butler fringes – Thickness of air film.
9. B-H loop using Anchor ring.
10. Specific charge of an electron – Thomson's method.

Part – 2BELECTRONICS AND MICROPROCESSOR 8085(Any TEN Experiments)

1. Design of UJT relaxation oscillator for a frequency – Generation of positive and negative triggering pulses.
2. SCR V-I characteristics and switching applications
3. Construction of square wave generator using IC 555 – study of VCO.

4. Design of Schmitt trigger circuit using IC 555 for a given hysteresis – Application as squarer.

5. Construction of pulse generator using the IC 555 – Application as frequency divider.

6. Op-Amp. – Active filters: Low pass, High pass and Band pass filters (Second Order).

7. Solving simultaneous equations - IC 741 / IC LM324.

8. IC 7476 / IC 7473 – Study of binary up / down counters

9. IC 7476 – Shift register, ring counter and Johnson counter (twisted ring counter).

MICROPROCESSOR 8085

10. Clock program – 12 / 24 hours.

11. LED interface – single LED on / off, binary, BCD, ring and Johnson counters.

12. Interfacing of seven segment display.

13. Interfacing R / 2R ladder DAC (IC 741) – Wave form generation.

14. DAC 0800 interface and wave form generation.

NOTE:

Practical Examination 1 – Questions from both Part 1A and Part 2A

Practical Examination 2 – Questions from both Part 1B and Part 2B

BOOK FOR REFERENCE

1. **D. Chattopadhyay**, **P. C. Rakshit**, and **B. Saha**, 2013, *An Advanced Course in Practical Physics*, 8th Edition, New central book agencies, Kolkata.

PAPER 9 SPECTROSCOPY

UNIT1 :MICROWAVE SPECTROSCOPY

Introduction to electromagnetic spectrum –Rotational spectra of diatomic molecules – Polyatomic molecules – Linear and symmetric top molecules – Hyperfine structure and quadrupole moment of linear molecules – Experimental techniques – Stark effect.

UNIT2 :NORMAL COORDINATE ANALYSIS

Selection rules for Raman and IR vibrational normal modes – Normal for Raman and IR activity C2V and C3V point groups – Representation of Molecular Vibrations in Symmetry co-ordinates – Normal coordinate analysis for H2O molecule

UNIT3 :INFRARED SPECTROSCOPY

Vibrations of diatomic and simple polyatomic molecules –Anharmonicity – Fermi Resonance – Hydrogen Bonding – Normal Modes of Vibration in a crystal – Solid State Effects – Interpretation of Vibrational Spectra – Instrumentation techniques – FTIR spectroscopy

UNIT4 :RAMAN SCATTERING

Vibrational and Rotational Raman spectra – Mutual Exclusion principle – Raman spectrometer – Polarization of Raman Scattering light. Structure Determination through IR

and Raman spectroscopy – Phase transitions – Resonance Raman Scattering

UNIT5 :NMR AND ESR SPECTROSCOPY

Quantum theory of NMR – Bloch equations – Design of CW NMR Spectrometer – Principle and block diagram of PT NMR – Chemical Shift – Application to molecular structure.

Quantum Theory of ESR – Design of ESR Spectrometer – Hyperfine Structure – Anisotropic systems – Triplet state study of ESR – Applications – Crystal defects –Biological studies

BOOKS FOR STUDY

1. **C. N. Banwell**and **E. M. McCash**, *2016, Fundamentals of Molecular Spectroscopy, 4th Edition, TMH, New Delhi.*

2. **G. Aruldas**, 2007, *Molecular Structure and Spectroscopy,* Prentice Hall of India Pvt. Ltd. New Delhi.

3. **D. N. Satyanarayana,***2004, Vibrational Spectroscopy and Applications*,New Age International Publication,India.

BOOKS FOR REFERENCE:

1. **D. D. Jyaji**and **M. D Yadav,** 1991, *Spectroscopy*, Anmol Publications, India.

2. **Atta-ur-Rahman,** 2012, *Nuclear Magnetic Resonance*, SpringerVerlag,Chennai

3. **D. A. Lang, 1977,***Raman Spectroscopy,* McGraw-Hill International,USA.

4. **Raymond Chang,** 1970, *Basic Principles of Spectroscopy,* McGraw-Hill Kogakusha, Tokyo.

PAPER 10BASIC MATERIALS SCIENCE

UNIT1 : INTRODUCTION

Classification of materials – materials for engineering applications – different types of chemical bonds – crystal structure s of important engineering materials – crystal imperfection and types of imperfections

UNIT2 : PHASE DIAGRAM

Systems – components – phases – solid solutions – Hume-Rothery's rule and Gibbs' Phase rule – Lever rule – construction of phase diagrams – eutectic, peritectic, eutectoid and peritectoid systems

UNIT3 : PHASE TRANSFORMATION

Mechanism – nucleation and growth – applications of phase transformations – cooling, casting, solidification and heat treatment – TTT diagram – martensitic transformation

UNIT4 : ELECTRON THEORY OF METALS

Classical free electron theory – density of states – electron energies in a metal – energy band and Fermi energy in solids – distinction between metals, insulators and semiconductors on the basis of Fermi level – effect of temperature on Fermi level

UNIT5 :ELECTRICAL AND MAGNETIC PROPERTIES OF MATERIALS

Electrical resistivity and conductivity of materials – dielectric materials – electrical polarization – piezo, pyro and ferroelectric materials – electrostriction – classification of magnetic materials – domain structure – magnetostriction – soft and hard magnetic materials

BOOKS FOR STUDY

1. **V. Raghavan**, 2015, *Materials Science and Engineering*, 4th Edition, PHI, India, (for units 2, 3, 4 and 5).
2. **G.K. Narula**, **K.S. Narula** and **V.K. Gupta**, 2001, *Materials Science*, Tata McGraw- Hill, India.
3. **W.Calister**, 2014, *Materials Science and Engineering*, 2nd Edition, Wiley India Pvt.Ltd.,

BOOKS FOR REFERENCE

1. **R.Balasubramaniyam** , 2014, *callister's Material science and engineering*, 2nd Edition, Willey India Pvt. Ltd., New Delhi.
2. **Lawrence H. Van Vlack**, 2002, *Elements of Materials Science and Engineering*, 6th Edition, Pearson,India.
3. **H. Iabch and H.Luth**, 2001, *Solid state Physics – An introduction to principles of Material Science*, 2nd Edition, Springer,Chennai.

PAPER 11 NANO SCIENCE

UNIT1 : FUNDAMENTALS OF NANOSCALE SCIENCE

Introduction –nano and nature – background to nanotechnology – scientific revolutions opportunities at the nanoscale – time and length scale in structures – surfaces and dimensional space – evolution of band structures and Fermi surfaces – electronic structure of nanocrystals – bulk to nano transition – size and shapes –dimensionality and size dependent phenomena.

UNIT2 : CLASSIFICATION OF NANOPARTICLES AND ITS PROPERTIES

Metal Nanoparticles: Size control of metal nanoparticles, Structural, Surface, electronic and optical properties.

Semiconductor Nanoparticles: solid state phase transformation, Excitons, Quantum confinement effect,Semiconductor quantum dots (SQDs), Correlation of properties with size, Quantum Well, Quantum Wires,Super lattices band and Band offsets, Quantum dot lasers.

Nano compositesand Carbon nano structures.

UNIT3 : SYNTHESIS OF NANOMATERIALS

Physical methods: Thermal evaporation, Spray pyrolysis, Molecular beam epitaxy (MBE), Physical vapourdeposition (PVD), Microwave heating, Electric arc deposition, Ion implantation.

Chemical methods: Chemical and co – precipitation, Sol fundamentals – sol – gel synthesis of metal oxides,Micro emulsions or reverse micelles, Solvothermal, Sonochemical synthesis, Electrochemical synthesis,Photochemical synthesis, Langmuir –blodgett (LB) technique, Chemical vapour deposition (CVD)

UNIT4 : CHARACTERIZATION TECHNIQUES

Powder X - Ray Diffraction, Scanning electron microscope (SEM), Transmission electron microscope(TEM), Scanning tunnelling microscope (STM), Atomic force microscope (AFM), Scanning probe microscopy(SPM), UV – Visible absorption, Impedance measurement, V – I characteristics, Vibrating samplemagnetometer (VSM).

UNIT5 : APPLICATIONS OF NANOMATERIALS

Nanophotonic Devices: ID, 2D, 3D Photonic crystals, Couplers, Waveguides, Photonic crystal fibres,Optical data storage systems and Quantum computing.

Medical applications: Imaging of cancer cells, Biological tags and Targeted nano drug delivery system.

Nanosensors: Sensors based on physical properties – Electrochemical sensors, Sensors for aerospace,defence and Biosensors.

Energy: Solar cells, LEDs and Photovoltaic device applications.

Photocatalytic applications: Air purification, Water purifications and Volatile organic pollution degradation.

Carbon nanotubes and applications: Field emission, Fuel cells and Display devices.

BOOKS FOR STUDY

1. Nanotechnology Principles and Practices by SulabhaK.Kulkarni, Capital publishing company (2007).
2. Introduction to nanotechnology by Charles P.Poole, Frank J. Owens, John Wiley & Sons publication (2003).,
3. Structure and properties of solid state materials by B. Viswanathan, 2nd Edition, Alpha ScienceInternational, (2006).
4. Nano – The Essentials by T.Pradeep, Tata McGraw - Hill publishing company limited (2007).

BOOKS FOR REFERENCE

1. Nanocomposite Science and Technology by Pulickel M. Ajayan, Linda S. Schadler, Paul V. Braun, John Wiley& Sons, (2006).
2. Nanoparticles: From Theory to Application by Günter Schmid, 2nd Edition, John Wiley & Sons, (2011).
3. Nanomaterials by B. Viswanathan, ,Narosa Publishing House Pvt. Ltd., New Delhi, (2009)
4. Nano Materials by A. K. Bandyopadhyay, 2nd Edition, New Age International Publishers Ltd., New Delhi,(2007).
5. Encyclopedia of Materials Characterization: Surfaces, Interfaces, Thin Films by C. R. Brundle, Charles

A.Evans, Shaun Wilson, Butterworth - Heinemann publishers (1992).
6. Synthesis of inorganic materials by Ulrich Schubert, Nicola Husing, 3rd Edition, John Wiley & Sons, (2012)
7. Cluster beam synthesis of nanostructured materials by Paolo Milani, Salvatore Iannotta, Springer, (1999)

PAPER 12 QUANTUM MECHANICS II

UNIT1 :GENERAL FORMALISM

Hilbert space, Dirac notation, representation theory, co-ordinate and momentum representations, time evolution, Schrodinger, Heisenberg and interaction pictures, symmetries and conservation laws, unitary transformations associated with translations and rotations, parity and time reversal.

UNIT2 :APPROXIMATION METHODS

Perturbation theory, variational method, WKB approximation– connection formulae(no derivation), WKB quantization rule– application to simple harmonic oscillator, hydrogen molecule, covalent bond and hybridization.

UNIT3 :TIME EVOLUTION PROBLEMS

Time dependent perturbation theory, constant and harmonic perturbations, transition probabilities, selection rules for dipole radiation.

UNIT4 :SCATTERING THEORY

Scattering amplitude, cross sections, Born approximation, partial wave analysis, effective range theory for s-wave, transformation from centre of mass to laboratory frame.

UNIT5 :RELATIVISTIC WAVE EQUATIONS

Klein– Gordon equation, Dirac equation, spin of electron, plane-wave solutions, interpretation of negative

energy states, energy values in a coulomb potential. Covariant form of Dirac equation: Gamma matrices and their properties, relativistic invariance of the Dirac equation, bilinear covariants and their Lorentz transformation properties.

BOOKS FOR STUDY

1. **P. M. Mathews** and **K. Venkatesan**, *2010, A Text book of Quantum Mechanics, Reprint,* Tata McGraw-Hill, New Delhi.

2. **L. I. Schiff**, *2014, Quantum Mechanics,* 3rd Edition, International Student Edition, MacGraw-Hill Kogakusha, Tokyo.

3. **E. Merzbacher**, 2011, *Quantum Mechanics,* 2nd edition, Alpha Science International Ltd; 2nd Revised edition,UK.

4. **V. K. Thankappan**, *2012, Quantum Mechanics,* 2nd Edition, Wiley Eastern Ltd, New Delhi.

5. **J.D. Bjorken** and **S.D. Drell**, 2013, *Relativistic Quantum Mechanics*, MacGraw-Hill, New York.

6. **V. Devanathan,** 2011, *Quantum Mechanics,* Narosa Publishing House, New Delhi.

7. **W.Greiner,** 2007,*RealtivisticQuantum Mechanics: Wave Equations,3rdEdtion,* Springer, New Delhi.

BOOKS FOR REFERENCE

1. **P. A. M. Dirac**, 2013, *The Principles of Quantum Mechanics*, Oxford University Press, London.

2. **L. D. Landau** and **E. M. Lifshitz**, 2013, *Quantum Mechanics*,Pergomon Press, Oxford.

3. **S. N. Biswas**, 2012, *Quantum Mechanics*, 2nd Edition ,Books And Allied Ltd., Kolkata.

4. **G. Aruldhas**, 2008, *Quantum Mechanics*, 2nd Edition, Prentice Hall of India, New Delhi.

5. **J. S. Bell, Gottfried** and **M.Veltman**, 2001, *The Foundations of Quantum Mechanics*, World Scientific, Singapore.

6. **V. Devanathan,** 2010, *Angular Momentum Techniques in Quantum Mechanics*, Kluwer Academic Publishers, Dordrecht.

PAPER 13 CONDENSED MATTER PHYSICS

UNIT1 :CRYSTAL PHYSICS

Types of lattices – Miller indices – Symmetry elements and allowed rotations – Simple crystal structures – Atomic Packing Factor– Crystal diffraction – Bragg's law – Scattered Wave Amplitude – Reciprocal Lattice (SC, BCC, FCC) – Diffraction Conditions – Laue equations – Brillouin zone – Structure factor – Atomic form factor – Inert gas crystals – Cohesive energy of ionic crystals – Madelung constant – Types of crystal binding (general ideas).

UNIT2 :LATTICE DYNAMICS

Lattice with two atoms per primitive cell – First Brillouin zone – Group and phase velocities – Quantization of lattice vibrations – Phonon momentum – Inelastic scattering by phonons – Debye's theory of lattice heat capacity – Thermal Conductivity –Umklapp process.

UNIT3 :THEORIES OF METALS AND SEMICONDUCTORS

Free electron gas in three dimensions – Electronic heat capacity –Wiedemann-Franz law – Band theory of metals and semiconductors – Bloch theorem –Kronig-Penney model – Semiconductors – Intrinsic carrier concentration – Temperature Dependence – Mobility – Impurity conductivity – Impurity states – Hall effect – Fermi surfaces and construction – Experimental methods in Fermi surface studies – de Hass-van Alphen effect .

UNIT4 : SUPERCONDUCTIVITY

Experimental facts: Occurrence – Effect of magnetic fields – Meissner effect – Critical field – Critical current – Entropy and heat capacity – Energy gap – Microwave and infrared properties – Type I and II Superconductors.

Theoretical Explanation: Thermodynamics of super conducting transition – London equation – Coherence length – Isotope effect – Cooper pairs – BCS Theory – Single particle tunneling– Josephson tunneling– DC and AC Josephson effects – High temperature Superconductors – SQUIDS.

UNIT5 :BASICS OF MAGNETISM

Definition and Units – Experimental Methods – Diamagnetism and Paramagnetism – Antiferromagnetism – Ferrimagnetisms – Ferromagnetism – Magnetization and the magnetic moment – Magnetic hysteresis loop – magnetic ordering and the Curie temperature – Different types of magnetic anisotropy –Magnetostriction and the effect of stress – Nano-magnetic materials thermal stability – Size effect of fine particles and thin films – Domains and Domains walls – soft Magnetic and Hard Magnetic Materials.

BOOKS FOR STUDY

PAPER 14COMPUTATIONAL METHODS AND PROGRAMMING

UNIT1 :SOLUTION OF EQUATIONS

Determination of zeros of polynomials –Roots of nonlinear algebraic equations and transcendental equations – Bisection and Newton-Raphson methods – Convergence of solutions.

UNIT2 :LINEAR SYSTEMS

Solution of simultaneous linear equations – Gaussian elimination – Matrix inversion – Eigenvalues and eigenvectors of matrices – Power and Jacobi Methods.

UNIT3 :INTERPOLATIONS AND CURVE FITTING

Interpolation with equally spaced and unevenly spaced points (Newton forward and backward interpolations, Lagrange interpolation) – Curve fitting – Polynomial least – squares fitting.

UNIT4 :DIFFERENTIATIONS, INTEGRATION AND SOLUTION OF DIFFERENTIAL EQUATIONS

Numerical differentiation – Numerical integration – Trapezoidal rule – Simpson's rule – Error estimates – Gauss-Legendre, Gauss-Laguerre, Gauss-Hermite and Gauss-Chebyshevquadratures – Numerical solution of ordinary differential equations – Euler and Runge-Kutta methods.

UNIT5 :PROGRAMMING WITH FORTRAN/C

Flow-charts – Integer and floating point arithmetic expressions – Built-in functions – Executable and non-executable statements – Subroutines and functions – Programs for the following computational methods: (a) Zeros of polynomials by the bisection method, (b) Zeros of polynomials/non-linear equations by the Newton-Raphson method, (c) Lagrange Interpolation, (d) Trapezoidal and Simpson's Rules, (e) Solution of first order differential equations by Euler's method.

BOOKS FOR STUDY

1. **V.Rajaraman**, 2013, *Computer oriented Numerical Methods*, 3rd Edition, PHI, New Delhi.

2. **M. K .Jain**, **S. R. Iyengar** and **R. K. Jain**, 2014, *Numerical Methods for Scientific and Engineering Computation*, 6th Edition, New Age Intl., New Delhi.

3. **S. S. Sastry**, 2012, *Introductory Methods of Numerical analysis*, 5th edition, PHI, New Delhi.

4. **F. Scheid**, 1998, *Numerical Analysis*, 2nd Edition, Schaum's series, McGraw Hill, New York.

5. **W. H. Press, S. A. Teukolsky, W. T. Vetterling** and **B. P. Flannery**, 2007, *Numerical Recipes in FORTRAN*, 3rd Edition, Cambridge Univ. Press,UK.

PAPER 15: PRACTICAL III

COMPUTATIONAL METHODS – FORTRAN / C PROGRAMMING

Part – 3A Advanced Microprocessor 8085 and Computational Methods (Any TEN Experiments)

Advanced Microprocessor 8085

1. ADC 0809 interface.
2. Interfacing of DC stepper motor – Clockwise, Anti-clockwise, Angular movement and Wiper action.
3. Interfacing of Temperature Controller and Measurement
4. Water level detector

Computational Methods

5. Lagrange interpolation with Algorithm, Flow chart, FORTRAN / C PROGRAM, and output.
6. Newton forward interpolation with Algorithm, Flow chart, FORTRAN / C PROGRAM, and output.
7. Newton backward with Algorithm, Flow chart, FORTRAN / C PROGRAM, and output.
8. Curve-fitting: Least squares fitting with Algorithm, Flow chart, FORTRAN / C PRO-GRAM, and output.

9. Numerical integration by the trapezoidal rule with Algorithm, Flow chart, FORTRAN / C PROGRAM, and output.

10. Numerical integration by Simpson's rule with Algorithm, Flow chart, FORTRAN / C PROGRAM, and output.

11. Numerical solution of ordinary first-order differential equations by the Euler method with Algorithm, Flow chart, FORTRAN / C PROGRAM, and output.

12. Numerical solution of ordinary first-order differential equations by the Runge-Kutta method with Algorithm, Flow chart, FORTRAN / C PROGRAM, and output.

Part – 3BGENERAL (Any FIVE Experiments)

1. GM counter – Characteristics, inverse square law, absorption coefficient.

2. GM counter – Feather's analysis: Range of Beta rays.

3. Hall Effect.

4. Susceptibility by Quincke's method.

5. B-H curve using CRO.

6. Thermal diffusivity of brass.

7. Thermal relaxation of bulb.

8. Conductivity measurement using four probe method.

9. Laser Experiments : (i) Diffraction at straight edge, (ii) Interference of laser beams – Lloyds single mirror method, (iii) Interference using an optically plane glass plate, (iv) Diffraction at a straight wire and (v) Diffraction at a circular aperture.

10. Experiments on optical fibers.

11. FFT and DFT of certain signals.

PAPER 16 CRYSTALGROWTH

UNIT1 : NUCLEATION

Nucleation concept – Kinds of nucleation – Classical theory of nucleation – Spherical nucleus – Induction period – Measurement – Heterogeneous nucleation – Equilibrium concentration of embryos – Energy of formation of a critical nucleus – Free energy of formation of a critical heterogeneous cap shaped and disc shaped nuclei – Nucleation rate.

UNIT 2 : CRYSTALGROWTH THEORIES

Surface energy theory – Diffusion theory – Adsorption layer theory – Volmer theory – Bravasis theory – Kossel theory – Two dimensional nucleation theory – Free energy of formation of a two dimensional nucleus – Possible shapes – Rate of nucleation

UNIT 3 : CRYSTAL GROWTHS FROM SOLUTION

Low temperature solution growth – Solution and Solubility – Preparation of solution – Principle of low temperature solution growth –Mier's solubility diagram – Measurement of solubility – Measurement of Ostwald–Mier's metastable zone width – Achievement of supersaturation.

Crystal Growth methods – Slow cooling method – Holden's rotary crystallizer – Mason Jar method – Slow evaporation method – Johnson's rotating crystal method –

Temperature gradient method – Kruger and Fink U tube method.

UNIT 4 : MELT GROWTH AND VAPOUR GROWTH

Growth of crystal from melt – Bridgman method – Czochralski method – LEC growth of III – V materials – Verneuil method – Phase diagram principle of zone refining – Zone melting method.

Physical vapour deposition – Chemical vapour deposition – Open and closed systems –Physical and thermo – chemical factors affecting growth process.

UNIT 5 : GEL GROWTH AND FLUX GROWTH

Gel growth – Different gel medium – Specific gravity – Silica gel – Agar gel – Basic growth procedure – Single diffusion technique – Double diffusion technique – Reaction method- Chemical reduction method.

High temperature solution growth (Flux growth) – Principle of flux growth – Slow cooling method – Slow evaporation method – Top seeded solution growth.

BOOKS FOR STUDY

1. **M. Ohora** and **R. C. Reid**, 1973, *Modeling of Crystal Growth Rates from Solution*, PHI , New Delhi.

2. **J. C. Brice**, 1986, *Crystal Growth Processes*, Blackie Academic & Professional (an Imprint of Chapman & Hall), 1st Edition, UK.

3. **J. C. Brice**, 1965, *The Growth of Crystals from Melt*, North Holland Publishing Company, Holland.

4. **D. Elwell** and **H. J. Scheel**, 2011, *Crystal Growth from High Temperature Solution*, Academic Press,London.
5. **Heinz K. Henish**, 1988, *Crystal Growth in Gels*, Cambridge University Press, UK.

BOOK FOR REFERENCE

1. **P. Ramasamy**and**F. D. Gnanam**, 1983,*UGC Summer School Notes*,Anna University, Chennai.

2. **P. SanthanaRaghavan** and **P. Ramasamy**, 2000, *Crystal Growth Processes*, 1st Edition,KRU Publications, Kumbakonam.

PAPER 17ADVANCEDMATERIALS SCIENCE

UNIT1 : CERAMICS AND COMPOSITES

Structural features – production of ceramics – forming and post forming process – mechanical properties – commercial ceramic system : Si-Al system technical ceramics – Zr and Si alloys – cement and concrete – composite materials – continuous and discontinuous fibre composites.

UNIT2 : POLYMERS

Classification of polymers – structural features – mechanism – thermoplastics – rubber and elastomers – physical, chemical and mechanical properties – cellular plastics – liquid crystal polymers.

UNIT3 :DIELECTRICS

Electrical polarisation – mechanism of polarization – optical, molecular and interfacial polarizability – classification of dielectric materials – piezoelectric, pyroelectric and ferroelectric materials – temperature and frequency effects on dielectric materials – applications of these materials.

UNIT4 : ELECTRONIC MATERIALS

Purification of electronic materials – single crystal growth – pulling method – wafer manufacture – oxidation – photolithography – doping technique – epitaxial growth – metallization – circuits and process simulation and integration – junction formation – junction lasers – contact formation.

UNIT5 :MAGNETIC MATERIALS

Classification of magnetism – origin and size of domain structure – hard magnetic materials – permanent magnetic alloys – magnetic steels and Al-Ni / Al-Ni-Co alloys – fine particle alloys – rare earth cobalt alloys – applications of permanent magnets – soft magnets – Si-Fe and nanocrystaline magnetic metals – microwave ferrites and garnets – magnetic bubbles.

BOOKS FOR STUDY

1. **V. Raghavan**, 2015, *Materials Science and Engineering*, 4th Edition, Printice-Hall India,New Delhi. (for units 2, 3, 4 and 5)
2. **C.M. Srivastava** and **C. Srinivasan**, 1987, *Science of engineering materials*, New Age Intl, New Delhi. (for units 1, 3 and 5)
3. **J. C. Anderson, K.D. Leaver, R.D. Rawlings** and **J.M. Alexander**, 1990, *Material Science*,4th Edition, Chapman & Hall, London.
4. **M. Arumugam**, 2010, *Materials Science*, 3rd revised Edition, Anuradha Agencies, Chennai.

BOOKS FOR REFERNCE

1. **G.K. Narula, K.S.Narula** and **V.K.Gupta**, 1989, *Materials Science*, Tata McGraw-Hill, New Delhi.

2. **Lawrence H. Van Vlack**, 1998, *Elements of Materials Science and Engineering*, 6thEdition, second ISE reprint, Addison-Wesley,India.

3. **H. Iabch and H.Luth**, 2013, *Solid state Physics – An introduction to principles of Material Science*, 2nd Edition, Springer, Chennai.

FOURTH SEMESTER

S. NO	COURSE COMPONENTS	NAME OF COURSE	SEMESTER	INST. HOURS	CREDITS	EXAM HRS	MAX MARKS	
							CIA	EXTERNAL
22	Core	Paper 18 – Nuclear and Particle Physics	IV	6	4	3	25	75
23	Core	Paper 19 – Practical – IV * Part – 3B & 4B – General	IV	4	4	4	40	60
24	Elective- III	Paper 20- Microprocessor 8086 and Microcontroller 8051	IV	4	3	3	25	75

25	Elective- IV	Paper 21- Energy Physics	IV	4	3	3	25	75
26	Core	Paper 22 – Project	IV		4		20	80
27	Soft Skills - IV	Computing Skills - Advanced	IV	2	2	3	40	60
				20	20		175	425

PAPER 18 NUCLEAR AND PARTICLE PHYSICS

UNIT1 : NUCLEAR MODELS

Liquid drop model – Bohr-Wheeler theory of fission – Experimental evidence for shell effects – Shell model – Spin-orbit coupling – Magic numbers – Angular momenta and parities of nuclear ground states – Qualitative discussion and estimate of transition rates – Magnetic moments and Schmidt lines – Collective model of Bohr and Mottelson

UNIT2 :NUCLEAR INTERACTIONS

Nucleon-nucleon interaction – Tensor forces – Meson theory of nuclear forces – Yukawa potential – Nucleon-Nucleon scattering – Effective range theory – Spin dependence of nuclear forces – Charge independence and charge symmetry of nuclear forces – Isospin formalism

UNIT3 :NUCLEAR REACTIONS

Types of reactions and conservation laws – Energetics of nuclear reactions –Dynamics of nuclear reactions – Q-value equation – Scattering and reaction cross sections – Compound nucleus reactions – Direct reactions – Resonance scattering – Breit-Wigner one level formula

UNIT4 :NUCLEAR DECAY

Beta decay – Fermi theory of beta decay – Shape of the beta spectrum – Total decay rate – Mass of the neutrino –

Angular momentum and parity selection rules – Allowed and forbidden decays – Comparative half-lives – Neutrino physics – Non-conservation of parity – Gamma decay – Multipole transitions in nuclei – Angular momentum and parity selection rules – Internal conversion – Nuclear isomerism.

UNIT5 :ELEMENTARY PARTICLE PHYSICS

Types of interaction between elementary particles – Hadrons and leptons – Symmetries and conservation laws – Elementary ideas of CP and CPT invariance – Classification of hadrons – SU(2) and SU(3) multiplets – Quark model – Gell-Mann-Okubo mass formula for octet and decuplet hadrons – Charm, bottom and top quarks

BOOKS FOR STUDY

1. **K. S. Krane**, *2008, Introductory Nuclear Physics*, Wiley, New York.
2. **D. Griffiths**, 2008, *Introduction to Elementary Particle Physics*, Wiley, 2nd revised edition, Germany**.**
3. **R. R. Roy** and **B.P. Nigam**, 1996, *Nuclear Physics*, New age Intl., New Delhi.
4. **V,Devanathan**, 2012, *Nuclear Physics*,2nd Edition, Narosa India, New Delhi.
5. **L.R.B Elton**, 1959, Introductory *Nuclear Physics*, Pitman Publishers, UK.
6. **W.Grieiner**, 2015, *Nuclear Physics: Present and future*, Springer Nature,India.

BOOKS FOR REFERENCE

1. **H. A. Enge**, 1983, *Introduction to Nuclear Physics*, Addison-Wesley, Tokyo.

2. **Y. R. Waghmare**, 1981, *Introductory Nuclear, Physics*, Oxford-IBH, New Delhi.

3. **S.N. Ghoshal**,2010,Atomic *and Nuclear Physics*, Vol. 2, S.Chand& Co Ltd, New Delhi.

4. **J. M. Longo**, 1971, *Elementary particles*, McGraw-Hill, New York.

5. **R. D. Evans**, 1972 *Atomic Nucleus*, McGraw-Hill, New York.

6. **I. Kaplan**, 2012, *Nuclear Physics*, 2nd edition,Narosa, New Delhi.

7. **B. L. Cohen**, 2001, *Concepts of Nuclear Physics*, 1st edition, TMH, New Delhi.

8. **M. K. Pal**, 1983, *Theory of Nuclear Structure*, 1st edition, Scientific and Academic Editions, Chennai.

9. **W. E. Burcham** and **M. Jobes**, 1995, *Nuclear and Particle Physics*, 2nd revised edition, John Wiley & Sons Inc., India.

PAPER 19 PRACTICAL IV

ANY TWO PARTS OUT OF PARTS A, B and C.

Part – 4AMICROPROCESSOR 8086 (MASM) AND MICROCONTROLLER 8051 (Any TEN Experiments)

(Compulsory for those who take the Elective: Microprocessor and Microcontroller)

Microprocessor 8086 Programs using MASM

1. Addition, Subtraction, Multiplication and Division (8 bit numbers)
2. Multibyte addition and subtraction (64 and 128 bit numbers)
3. Square and square root of 8 bit number
4. Sum of a set of N data (8 – bit numbers), average of N numbers.
5. Sorting in ascending and descending order. Picking up the smallest and largest number in an array.
6. Generation of Fibonacci series.

Micro controller 8051

7. Addition, subtraction, multiplication and division of two 8-bit numbers.
8. Sum of a series of 8-bit numbers, average of N numbers.

9. Factorial of number, Fibonacci series of N terms.
10. Sorting in ascending and descending order – Picking up smallest and largest number.
11. LED interface – Binary up/down counter, BCD up/down counter, Ring and twisted ring counter.
12. Interfacing seven segment display.
13. DAC 0800 / 1408 interface and wave form generation.
14. ADC interfacing. Stepper motor interfacing.

Part – B – ADVANCED EXPERIMENTS I

(Compulsory for those who take the Elective: Advanced Materials Science)

(Any FIVE Experiments)

1. Michelson Interferometer – Wavelength, separation of wavelengths.
2. Michelson Interferometer – Thickness of mica sheet.
3. Susceptibility by Guoy's method.
4. Ultrasonics – Compressibility of a liquid.
5. Miscibility measurements using ultrasonic diffraction method.
6. Dielectric measurements in Microwave test bench.

7. Iodine absorption spectra
8. Molecular spectra – AlO band
9. Molecular spectra – CN bands
10. UV-visible spectroscopy – Verification of Beer-Lambert's law and identification of wave-length maxima – Extinction coefficient.
11. Powder XRD – Determination of lattice parameters.

NOTE:

Practical Examination 3 – Questions from both Part 3A and Part 4A

Practical Examination 4 – Questions from both Part 3B and Part 4B

Book for Reference:

1. **D. Chattopadhyay**, **P. C. Rakshit**, and **B. Saha**, 2013, *An Advanced Course in Practical Physics*, 8th Edition, New Central book Agencies, Kolkata.

Part - C – ADVANCED EXPERIMENTS II

(Compulsory for those who take the Elective: Advanced Spectroscopy)

Any **SIX** Experiments:

1. Iodine Absorption Spectrum.
2. Molecular spectra – CN bands.

3. UV – Visible Spectroscopy – verification of Beer-Lambert's law and identification ofwavelength maxima – Extinction Coefficient.
4. UV- Visible Spectroscopy – Identification and measurement of a component in a mixture.
5. Infrared and Raman Spectra and Vibrational band assignments of Organic, Inorganic and Crystalline materials.
6. Infrared and Raman Spectra – Normal coordinate analysis of XY2 bent symmetrical and XY3 pyramidal molecules.
7. Spectroflurometer – Characterization of materials.
8. Experiments on Optical fibers.
9. Laser Experiments
    i. Diffraction at straight edge.
    ii. Interference of laser beams – Llyods single mirror method.
    iii. Interference using an optically plane glass plate and a laser
    iv. Laser diffraction at a straight wire
    v. Laser diffraction at a circular aperture.
10. Study of vibrational spectra – IR and Raman studies of Organic compounds.
11. Characterization of Organic Compounds using UV-Visible spectrometer.
12. Microwave bench – Microwave measurements.

PAPER 20MICROPROCESSOR 8086 AND MICROCONTROLLER 8051

UNIT1: 8086 ARCHITECTURE AND PROGRAMMING

8086 Architecture – Min.Mode, Max.Mode – Software Model – Segmentation-Segmentation of address – Pipe line Processing.

Addressing Modes – Instruction Set– Constructing Machine Code – Instruction Templates for MOV Instruction– Data Transfer Instructions– Arithmetic, Logic, Shift, rotate instructions-Flag Control instructions– Compare, Jump Instructions– Loop and String instructions –Assembly programs– Block move, Sorting, Averaging, Factorial – Code Conversion : Binary to BCD , BCD to Binary.

UNIT2 : 8051MICROCONTROLLER HARDWARE

Introduction – Features of 8051 – 8051 Microcontroller Hardware : Pin-out of 8051, Central Processing Unit (CPU), Internal RAM, Internal ROM, Register set of 8051 – Memory organization of 8051 – Input / Output pins, Ports and Circuits – External data memory and Program memory : External program memory, External data memory.

UNIT3 :8051 INSTRUCTION SET AND ASSEMBLY LANGUAGE PROGRAMMING

Addressing modes – Data moving (Data transfer) instructions : Instructions to Access external data memory, external ROM / program memory, PUSH and POP instructions, Data exchange instructions – Logical instructions : byte and bit level logical operations, Rotate and swap operations – Arithmetic instructions : Flags, Incrementing and decrementing, Addition, Subtraction, Multiplication and division, Decimal arithmetic – Jump and CALL instructions : Jump and Call program range, Jump, CALL and subroutines – Programming.

UNIT4 :INTERRUPT PROGRAMMIG

8051 Interrupts – Interrupt vector table – Enabling and disabling an interrupt – Timer interrupts and programming – Programming external hardware interrupts – Serial communication interrupts and programming – Interrupt priority in the 8051 : Nested interrupts, Software triggering of interrupt.

UNIT5 :INTERFACING TO EXTERNAL WORLD

Interfacing keyboard: Simple keyboard interface, Matrix keyboard interface – Interfacing displays: Interfacing seven segment LED displays, Interfacing LCD display – Interfacing DAC to 8051– Interfacing ADC to 8051 – Interfacing sensors – Interfacing stepper motor.

BOOKS FOR STUDY

1. A. P. Godse and D. A. Godse, 2011,2nd edition, *Microprocessors & its Applications*, Technical Publications, Pune.

2. Kenneth Ayala, 2015, *The 8051 Microcontroller*, Third Edition, Delmar Cengage Learning Pvt.Ltd., New Delhi.

3. W.A. Triebel and Avatar Singh, 2002, *The 8086 /8088 Microprocessors- Programming,Software, Hardware and application,*Prentice Hall of India, New Delhi. (Unit 2)

BOOKS FOR REFERENCE

1. Douglas V. Hall,1992, *Microprocessors and Interfacing programming and Hardware*, Tata McGraw Hill, (Unit 1), New Delhi.

2. B. Brey, 2008, *Intel Microprocessors 8086/8088, 80186,80286,80486,80486, Architecture, Programming and Interfacing*,PearsonEducation,India.

3. Yu – Cheng and Glenn A. Gibson, 1986, *The 8086 / 8088 family Architecture, Programmingand Design*, Prentice-Hall of India.

4. Muhammed Ali Mazidi and Janice Gillespie Mazidi, 2012, *The 8051 Microcontrollerand Embedded Systems*, Fourth Indian Reprint, Pearson Education,India.

5. V.Vijayendran,2009,*Fundamentals of Microprocessor–8086- Architecture,Programming (MASM)&interfacing*,Viswanathan printers, Chennai.

PAPER 21 ENERGY PHYSICS

UNIT1 : ENERGY SOURCES

Introduction to energy sources–Energy sources and their availability – prospects ofrenewable energy sources – Energy from other sources – chemical energy – Nuclear energy – Energy storage and distribution.

UNIT2 : ENERGY FROM OCEANS

Energy from the oceans – Energy utilization – Energy from tides – Basic principle of tidal power – utilization of tidal energy.

UNIT3 : WIND ENERGY

Basic principles of wind energy conversion – power in the wind – forces in the Blades – Wind energy conversion – Advantages and disadvantages of wind energy conversion systems (WECS) Energy storage – Applications of wind energy.

UNIT4 : BIOMASS ENERGY

Energy from Biomass: Biomass conversion Technologies – wet and dry process – Photosynthesis.Biogas Generation: Introduction – basic process and energetic – Advantages of anaerobic digestion – factors affecting bio digestion and generation of gas – biogas from waste fuel – properties of biogas– utilization of biogas.

UNIT5 : SOLAR ENERGY

Solar radiation and its measurements – solar, cells : Solar cells for direct conversion of solar energy to electric powers – solar cell parameter – solar cell electrical characteristics – Efficiency – solar water Heater – solar distillation – solar cooking – solar green house.

BOOKS FOR REFERENCE

1. **G.D. Rai**,2004, *Non-conventional energy sources*, 4th edition, Khanna Publishers, New Delhi.
2. **S. Rao** and **Dr.Parulekar, 2009,** *Energy Technology: Non-conventional, Renewable &Conventional*,Khanna Publishers, New Delhi.
